

WARM UP YOUR LIFE INSTANTLY.

SERIOUS COMFORT AND CONVENIENCE.

You will love having instant hot water at every tap. Top quality construction ensures it's virtually maintenance-free.

LEAVES LOTS OF ROOM UNDER THE SINK.

A space-saving design places the pump at the hot water heater, which means only the small valve goes under the sink. It's discreet and doesn't take up space that's needed for storage. This also eliminates noise.

SIMPLE TO INSTALL.

As it doesn't need a dedicated line, the system is inexpensive and can easily be installed. Unlike some products, there's no pump under the sink, so there's no need to install a GFIC outlet and no need for multiple trades to complete the job.

SAVES WATER.

In the average household, over 12,000 gallons of water go down the drain each year as people wait for their water to warm up. Installing the Astro Express conserves water, saves money – and does a little bit to help the environment.

ASTRO EXPRESS VALVE

The valve is placed at the tap location furthest from the water heater. The forged-brass valve is easy to install with its integrated positioning legs. The easy-to-use valve adjustment permits accurate flow control to suit user temperature preference.

THE ASTRO 20 BU-T CIRCULATOR

Located on the water heater hot water line, the bronze-cased circulator provides virtually silent, maintenance-free performance. The pump is controlled by a 24-hour timer which allows homeowners to schedule delivery of hot water in 15-minute increments throughout the day.
