Performance Data

CONSTRUCTION

A TWO BARRIER SEALS

One epoxy barrier and one compression fitting for maximum protection against wicking and water seepage into the motor housing.

B BEARINGS

The heavy-duty ball bearings, upper (radial) and lower (thrust), are continuously lubricated by oil to ensure long service life.

C MOTOR

Electrical design combines the advantages of high torque output with optimum running efficiency engineered specifically for grinder operation.

D STATOR BOLTS

The stator is secured to the motor housing by means of stator bolts which ensure ease of maintenance if the need ever arises.

E SHAFT

Standard stainless steel shaft in grinder pump.

F DUAL SEALS

Dual seals for maximum moisture protection.

G MOISTURE PROBE

Moisture detection probe.

H CUTTERS

Exclusive "Dual Cutter" design cuts solids to smallest particle size thereby greatly reducing clogging, roping, or binding.

I IMPELLER

Engineered non-metallic semi-open impeller molded to a bronze insert for greatest torque driving capabilities. Impeller made of high strength Valox which provides highest level of corrosion resistance and maximum toughness from impact for a wide variety of slurry pumping. Pump-out vanes preclude material build-up around shaft and seal. Bronze impeller available.
